Resources & CV Tips

Created by **InvataCyber**

This document is an AI-generated summary of the Learn Cyber community's resources and CV-review channels.

Contents

Useful Resources 3

- Learning Paths & Roadmaps 3
- Practice & Labs (CTF) 3
- IT Foundations & Scripting 3
- Web, OWASP & Bug Bounty 4
- Red Team / Offensive 4
- Blue Team, DFIR & Malware Analysis 5
- CVEs & Write-ups 5
- Certifications & Exam Prep 6
- GRC 7
- Research & Academic Reading 7
- Creators, Channels & Communities 7
- Miscellaneous 8

CV Tips 10

- Structure & length 10
- Make it ATS-friendly 10
- Skills section 10
- Experience & projects 10
- Certifications 11
- Formatting & template 11
- GitHub, email & personal data 11
- The job-hunt reality 11
- CV Tools & Templates 11

Useful Resources

A collection of every link shared and discussed by the community, grouped by category. Start with a learning path, practice constantly, and document everything you do. This is not an exhaustive list of cybersecurity resources. You will discover many other valuable resources as you explore this domain.

Learning Paths & Roadmaps

- **roadmap.sh - Cyber Security** Visual roadmap of what to learn and in what order.
  https://roadmap.sh/cyber-security
- **TryHackMe - Beginner Path** Guided, hands-on path for beginners.
  https://tryhackme.com/beginner-path
- **TryHackMe - Pre Security** Networking, Linux and Windows before anything else.
  https://tryhackme.com/path/outline/presecurity
- **TryHackMe - Jr Penetration Tester** The offensive (Red Team) starting point.
  https://tryhackme.com/path/outline/jrpenetrationtester
- **TryHackMe - SOC Level 1** The defensive (Blue Team) starting point.
  https://tryhackme.com/path/outline/soclevel1
- **TryHackMe - Cyber Security 101** Broad defensive foundation.
  https://tryhackme.com/path/outline/cybersecurity101
- **HTB Academy** Structured modules: Linux, networking, AD, web.
  https://academy.hackthebox.com/
- **HTB Academy - Getting Started** Introductory HTB Academy module.
  https://academy.hackthebox.com/module/details/143
- **HTB Academy - Linux Fundamentals**
  https://academy.hackthebox.com/module/details/18
- **HTB Academy - Intro to Networking**
  https://academy.hackthebox.com/module/details/34
- **Cyber-Edu** Cybersecurity learning platform.
  https://cyber-edu.co/

Practice & Labs (CTF)

- **OverTheWire - Bandit** Learn Linux and the shell through a wargame.
  https://overthewire.org/wargames/bandit/
- **picoCTF** Beginner-friendly CTF challenges.
  https://picoctf.org/
- **VulnHub** Downloadable vulnerable VMs.
  https://www.vulnhub.com/
- **CyberDefenders - Network Forensics** Blue Team / forensics CTF challenges.
  https://cyberdefenders.org/blueteam-ctf-challenges/?categories=network-forensics
- **CyberPlay** Gamified security learning.
  https://cyberplay.games/en
- **Terminal43 CTF** Romanian CTF platform.
  https://ctf.terminal43.ro/
- **Creed CTF** A community machine to attack.
  https://creed-ctf.fr/machines/ddcba2b3-c3bc-4d61-a33d-c35d8bffe115
- **3whoSec - Write-ups OverTheWire** Write-ups for the OverTheWire wargame.
  https://github.com/3whoSec/WRITEUP_CTF/tree/main/CTF-WRITEUPS%2FOverTheWire

IT Foundations & Scripting

- **Automate the Boring Stuff with Python** Free, beginner-friendly Python.
  https://automatetheboringstuff.com/

- **TryHackMe - Python Basics** Scripting fundamentals for security.
  https://tryhackme.com/room/pythonbasics
- **TryHackMe - Linux Fundamentals** grep, awk, sed, pipes, loops.
  https://tryhackme.com/module/linux-fundamentals
- **TryHackMe - Windows Fundamentals 1**
  https://tryhackme.com/room/windowsfundamentals1xbx
- **TryHackMe - Windows Fundamentals 2**
  https://tryhackme.com/room/windowsfundamentals2x0x
- **TryHackMe - Windows Fundamentals 3**
  https://tryhackme.com/room/windowsfundamentals3xzx
- **Cisco Packet Tracer (NetAcad)** Build and test virtual networks.
  https://www.netacad.com/courses/packet-tracer
- **EPAM Campus** Free, thorough general IT courses.
  https://campus.epam.am/en/training?filter=%7B%22Locations%22%3A%5B4%5D%2C%22Level%22%3A%5B1%2C2%5D%7D
- **explainshell.com** Breaks any shell command into its parts.
  https://explainshell.com/
- **free-for.dev** Free tiers of tools and services.
  https://free-for.dev/

Web, OWASP & Bug Bounty

- **PortSwigger Web Security Academy** The free standard for web hacking.
  https://portswigger.net/web-security
- **OWASP Top 10** The most critical web vulnerabilities.
  https://owasp.org/www-project-top-ten/
- **HackerOne** Bug bounty platform.
  https://hackerone.com
- **Bugcrowd** Bug bounty platform.
  https://bugcrowd.com
- **Intigriti** Bug bounty platform.
  https://intigriti.com
- **Synack** Bug bounty platform.
  https://synack.com
- **YesWeHack** Bug bounty platform.
  https://yeswehack.com

Red Team / Offensive

- **TryHackMe - Active Directory Basics** AD is the backbone of enterprise networks.
  https://tryhackme.com/room/activedirectorybasics
- **Hacking Articles** Walkthroughs and technique write-ups.
  https://www.hackingarticles.in/
- **GTFOBins** Unix binaries abused to bypass local controls.
  https://gtfobins.github.io/
- **LOLBAS** Windows binaries for Living Off The Land.
  https://lolbas-project.github.io/
- **LOLDrivers** Windows drivers used by adversaries.
  https://www.loldrivers.io/
- **LOOBins** macOS binaries abused by threat actors.
  https://www.loobins.io/
- **LOTS Project** Legitimate domains abused in attacks.
  https://lots-project.com/
- **HijackLibs** DLL hijacking candidates.
  https://hijacklibs.net/
- **bloodyAD** Active Directory exploitation tool.

https://github.com/CravateRouge/bloodyAD

- **APTs Adversary Simulation** APTs from an offensive point of view.
  https://github.com/S3N4T0R-0X0/APTs-Adversary-Simulation
- **SyscallRevenant** EDR evasion tooling.
  https://github.com/SilentisVox/SyscallRevenant
- **PhantomBuffer** EDR evasion tooling.
  https://github.com/TwoSevenOneT/PhantomBuffer
- **Inside the Falcon (CrowdStrike)** How an EDR catches you; useful for evasion.
  https://0xdbgman.github.io/posts/inside-the-falcon-how-crowdstrike-catches-you/
- **NVIDIA garak** Vulnerability scanner for LLMs.
  https://github.com/NVIDIA/garak
- **Red Team Ops (Zero-Point Security)** Well-regarded paid red team course.
  https://www.zeropointsecurity.co.uk/course/red-team-ops

Blue Team, DFIR & Malware Analysis

- **AD Security** Active Directory attack and defense reference.
  https://adsecurity.org/
- **Ultimate Windows Security - Log Encyclopedia** What every Windows event ID means.
  https://www.ultimatewindowssecurity.com/securitylog/encyclopedia/
- **Detection.fyi** Searchable detection rules.
  https://detection.fyi/
- **The Blind Spot in the Watchtower (detect.fyi)** Detections for when Sentinel is attacked.
  https://detect.fyi/the-blind-spot-in-the-watchtower-detections-for-when-someone-attacks-your-sentinel-897709f0dcd9
- **Malware-Traffic-Analysis.net** Real PCAPs and analysis exercises.
  https://malware-traffic-analysis.net/
- **FLARE-VM** Windows VM for malware analysis.
  https://github.com/mandiant/flare-vm
- **DFIR Galaxy Workstation** VM for digital forensics.
  https://github.com/msoheem/DFiR-Galaxy-Workstation
- **Trace Labs OSINT VM** Workstation for OSINT and phishing analysis.
  https://tracelabs.org/blog/trace-labs-osint-vm-2026-05-rebuilt-on-debian/
- **filesec.io** File extensions abused by attackers.
  https://filesec.io/
- **WTFBins** Benign binaries that look like malware.
  https://wtfbins.wtf/
- **ANY.RUN** Interactive online malware sandbox.
  https://any.run/
- **ANY.RUN - Lazarus IT Workers** Investigation into the Lazarus group.
  https://any.run/cybersecurity-blog/lazarus-group-it-workers-investigation/
- **ANY.RUN - blog** Articles on the ANY.RUN blog.
  https://any.run/cybersecurity-blog/author/a-bespalova/
- **vx-underground** Massive malware-research archive.
  https://vx-underground.org/
- **Infosec Survival Guide - Orange (Incident Response)** Practical incident response guide.
  https://spearphish-general-store.myshopify.com/collections/infosec-survival-guides/products/the-infosec-survival-guide-orange-book-incident-response-digital
- **Infosec Survival Guide - Yellow (Core Skills)** Core-skills guide.
  https://spearphish-general-store.myshopify.com/collections/infosec-survival-guides/products/the-infosec-survival-guide-yellow-book-core-skills-digital

CVEs & Write-ups

- **Wiz - php2shell (PHP RCE)** Write-up on a PHP RCE chain.
  https://www.wiz.io/blog/php2shell-php-rce
- **TryHackMe - CVE php2shell** The matching TryHackMe room.

https://tryhackme.com/room/cvephp2shell

- **morluto/rea** Tool related to php2shell.
  https://github.com/morluto/rea
- **KitPloit - CVE-2025-32432** Tools listed for a CVE.
  https://kitploit.com/en/tools?q=CVE-2025-32432

Certifications & Exam Prep

- **Professor Messer (YouTube)** Free full Security+ video course.
  https://www.youtube.com/@professormesser
- **Professor Messer (site)** Security+ notes and resources.
  https://www.professormesser.com/
- **Jason Dion (Udemy)** Courses and practice tests.
  https://www.udemy.com/user/jason-dion/
- **ExamCompass - Security+ practice** Free practice tests.
  https://www.examcompass.com/comptia/security-plus-certification/free-security-plus-practice-tests
- **Security+ Anki flashcards**
  https://ankiweb.net/shared/info/911636150
- **Security+ (video)**
  https://youtu.be/qnP4QuYLwEQ
- **Jeremy's IT Lab (CCNA)** Free complete CCNA course with quizzes.
  https://www.youtube.com/@JeremysITLab
- **Jeremy's IT Lab - courses**
  https://courses.jeremysitlab.com/
- **AWS CCP - practice (Udemy)**
  https://www.udemy.com/course/practice-exams-aws-certified-cloud-practitioner
- **AWS Cloud Practitioner Essentials** Official free AWS path.
  https://skillbuilder.aws/learn/94T2BEN85A/aws-cloud-practitioner-essentials
- **HTB CBBH review (A. Raducu)**
  https://alexandruionutraducu.com/posts/cbbh_review/
- **HTB CPTS (Bruno Rocha Moura)**
  https://www.brunorochamoura.com/tags/cpts-%EF%B8%8F/
- **HTB CPTS (video)**
  https://youtu.be/Tw6BycGF7ZM
- **PortSwigger Academy (BSCP)** Free labs that prepare you for BSCP.
  https://portswigger.net/academy
- **BSCP - DingyShark**
  https://github.com/DingyShark/BurpSuiteCertifiedPractitioner
- **BSCP - DCKento notes**
  https://github.com/DCKento/Burp-Suite-Certified-Practitioner-Notes.git
- **BSCP - botesjuan study**
  https://github.com/botesjuan/Burp-Suite-Certified-Practitioner-Exam-Study
- **BSCP review (a3h1nt)**
  https://a3h1nt.github.io/2024/04/15/Burp-Suite-Certified-Practitioner-Review.html
- **BSCP survival guide (tontac)**
  https://tontac.team/bscp-exam-survival-guide-what-you-need-to-know-before-the-battle/
- **BSCP review (Micah van Deusen)**
  https://micahvandeusen.com/blog/burp-suite-certified-practitioner-exam-review/
- **BSCP review (at0m, FR)**
  https://at0m.space/blogs/de-z%C3%A9ro-%C3%A0-la-bscp-mon-parcours-et-mes-astuces/
- **BSCP guide (Zoltan3422)**
  https://github.com/Zoltan3422/portswigger-guide?tab=readme-ov-file
- **BSCP review (edgenask, Medium)**
  https://medium.com/@edgenask/burp-suite-certified-practitioner-bscp-review-tips-and-comparison-with-ewpt-7048d36314d2
- **EC-Council - Hackers4Humanity (CPENT)** Discount / context for CPENT.

https://www.eccouncil.org/hackers4humanity/

- **CPENT CheatSheet - IoT**
  https://github.com/Rexturnull/CPENT-CheatSheet/blob/master/3.IOT/IOT.md
- **CPENT CheatSheet - AD / Kerberos**
  https://github.com/Rexturnull/CPENT-CheatSheet/blob/master/6.AD%20Pentest/Kerberos.md
- **CPENT CheatSheet - PWN**
  https://github.com/Rexturnull/CPENT-CheatSheet/tree/master/5.PWN
- **CPENT-Learning**
  https://github.com/Cyber-Security-Warriors/CPENT-Learning
- **Blue Team Level 1 (BTL1)** Entry-level defensive certification.
  https://www.centri.org/certifications/blue-team-level-1
- **Cisco - Learn and Earn CE credits** CE credits for Cisco recertification.
  https://learningnetwork.cisco.com/s/question/0D5QO00002cjc4G0AQ/-learn-and-earn-up-to-15-continuing-education-ce-credits-with-rev-up-to-recert-stack-launching-today-

GRC

- **Simply Cyber - GRC Analyst Program** Community-recommended GRC program.
  http://academy.simplycyber.io/p/the-definitive-grc-analyst-program
- **GRC Mastery** GRC resources.
  https://grcmastery.com

Research & Academic Reading

- **arXiv** Preprints across tech and security.
  https://arxiv.org/
- **Google Scholar** Find academic papers.
  https://scholar.google.com/
- **IEEE Xplore** Peer-reviewed research.
  https://ieeexplore.ieee.org/Xplore/home.jsp
- **ResearchGate** Papers from academics and researchers.
  https://researchgate.net
- **Scopus - Sources** Indexed journals and papers.
  https://www.scopus.com/sources

Creators, Channels & Communities

- **UnixGuy (YouTube)** Cybersecurity career content.

- **Căutare: serviciul Bonjour** Context on the Bonjour / mDNS service.
  https://www.google.com/search?q=bonjour+service

CV Tips

> *The tips below are only suggestions gathered from the community's discussions. There is no perfect recipe: the deciding factor varies from one employer to another, and even from one CV to another. We offer them to help, not as absolute truth. Everyone has a different path and different experience, so take what fits you and leave the rest.*

Structure & length

- As a junior, keep your CV to 1-2 pages.
- Order sections top to bottom: Experience, Projects, Skills, Education. Professional experience always comes first because it carries the most weight.
- Open with a short Summary (2 or 3 lines) saying who you are and what you are strongest at, meaning the technologies and tools you actually know well, not a list of things you touched once.
- List experience in reverse chronological order: most recent on top. Many people write it the other way around, which confuses the reader.

Make it ATS-friendly

- Use the heading "Summary", not "Profile"; it is validated by most ATS. Likewise "Experience" instead of "Professional Experience".
- Use "Skills", not "Knowledge" or "Technical Skills". "Skills" is the keyword the parsers look for.
- Avoid stray commas in headings. "Bachelor's degree, Computer Science" breaks parsing, because the comma is read as a column delimiter. Write "Bachelor of Science in Computer Science" (3-year degree) or "Bachelor of Engineering in Computer Science" (4-year engineering degree).
- Avoid diacritics; you don't know what encoding settings the HR software uses. Keep it simple.
- Drop "etc.", "Verify" and other filler. No one knows how a parser reads an "etc." after a list, neither the ATS nor the human.
- Don't paste text straight from an AI resume builder. It can inject invisible whitespace or artifacts that make the ATS break at tokenization.
- Add languages in CEFR format (A1 to C2). If the posting says you need English, the ATS checks exactly that.
- Add "GenAI" to your skills. It is scanned for more and more, even when it isn't explicitly in the job description.

Skills section

- List skills as simple bullet points, one after another, without "Programming / Tools" sub-categories in front.
- Think of your CV as being decomposed into JSON. The flatter and simpler the structure, the better it parses.
- It is more valuable to show skills through projects than through a long tool list. Tools can be inferred from what you built.

Experience & projects

- Integrate technologies into sentences; don't just dump them at the end. Instead of a dry list, write for example: "hosted an Ubuntu machine on Hetzner, provisioned it with Terraform and hardened it with AIDE, storing data in a relational database".
- Don't throw in terms without context. If you say you use a SIEM, say which one and how you aggregate logs; otherwise a word like "endpoint" dropped in there means nothing.
- Describe what you actually did, your input and your impact, in 5 or 6 lines per role, in past simple and with a subject in the sentence.

- No experience yet? Build projects. Set up a home lab, document a few CTFs in a repo and link it (for example a GitHub Pages site with your write-ups).
- Replace the headings "CTF Competitions" and "Community Involvement" with a single "Projects" section, each project hyperlinked to a repo or write-up.

Certifications

- Keep a few certifications relevant to your level and hyperlink each one. Use Credly or similar, not platforms where the reader has to create an account to verify.
- Remove "Verify" links. Everything stalls there, because it forces someone to take an extra step.
- Be consistent with the heading (for example "Certificates") and check you don't have accidentally duplicated text.

Formatting & template

- Use a clean, minimal, black-and-white template. Jake's Resume (on Overleaf) is a solid choice; FlowCV is a free and simple option.
- Europass is fine only for public institutions. In the private sector it is worth almost nothing.
- Make sure headings keep the same alignment across pages; don't let headers jump from one alignment to another.
- Use proper bullet characters (Unicode U+2022) or your platform's list feature, not dots typed by hand.

GitHub, email & personal data

- Your GitHub is your second CV. Tidy it up: professional name and photo, documented repos.
- Use a professional email address. When a recruiter sees a random provider, it reads as low trust; your email is the "root of trust" for serious accounts.

The job-hunt reality

- A recruiter may get 200 CVs. An AI filters them against the posting, 10 or 20 remain, and a human looks at those for under a minute. Make every second count.
- Tailor your CV to each posting. Don't apply to L2 or L3 roles with no relevant experience, and don't put blue-team projects when applying for pentest; they become noise.
- Don't mix roles in the same place (for example "junior pentester" and "security analyst" stuck together). Pick a direction and build the CV around it.
- The market is tough right now and juniors are at a disadvantage. Differentiate with personal projects and, if needed, consider relocating. Often you have to start at L1 before L2 or L3.
- Where do you put a fresh CVE? In a "Projects" or "Vulnerability Research" section, hyperlinked. If it pushes you over one page, cut elsewhere.
- Remove what is irrelevant for a remote or hybrid job, such as a tourist visa or a driver's license. It only takes up space.

CV Tools & Templates

- **FlowCV** Free online CV builder.
  https://app.flowcv.com/
- **Jake's Resume (Overleaf)** Clean, ATS-friendly LaTeX template.
  https://www.overleaf.com/latex/templates/jakes-resume/syzfjbzwjncs
- **Jake's Resume (download)** Same template, direct download.
  https://jakesresume.com/download/
